SpliceCom maximiser business telephony system takes off at Queensland Airport Limited's Townville & Gold Coast Airports

Queensland Airports Limited (QAL) has installed SpliceCom's maximiser system at Townsville and Gold Coast (Coolangatta) Airports.

Peter Nelson, IT Manager for QAL talked about some of the reasons for selecting SpliceCom. "One of the major factors was SpliceCom's scalability. It suited us particularly because we have an immediate need, but our longer term needs are not determinable now, so this was a big plus for SpliceCom because they can scale from 8 to 5000 extensions on the one system."

QAL have connected the two airports so that communication are made easy between the two airports. They have also made use of their present wiring infrastructure for their legacy analogue phones saving on cabling and installation costs. Peter added "the flexibility of the SpliceCom allows us to have a VOIP system and still retain some of our essential analogue services in the one phone system".

Martin Petersen CEO of SpliceCom Australia said "communications is obviously very important to airports, and QAL had done their due diligence on SpliceCom and the maximiser system and we were happy that we came up trumps". Peter mentioned "I searched the market for about a year and SpliceCom was the only product that had ticks in almost all the boxes."

The systems were installed by Sirocco Technologies Group Pty.Ltd.who is an authorized reseller of SpliceCom's systems.

SpliceCom Australia Pty. Ltd. www.splicecomaustralia.com is the exclusive distributor of the maximiser IP business telephony system

Queensland Airports Limited is owner operator of Gold Coast, Townsville and Mt Isa Airports.
